

Data Capturing/Land Use Audit

Cadre has been appointed by the COGTA to conduct a land use audit within the Sedibeng and West Rand District Municipality towards credible land use schemes and improved municipal valuation rolls. To this end Cadre improved the National Land Use Classification system. The system contains more than 270 land use categories. The land use audit aims to render up-to-date and accurate information pertaining to land uses on approximately 550 000 land parcels.

The team uses a range of data sources and verification of on-site boundaries and aim to complete the work by February 2022.
